

Dear Unanma Justice Chisom,

Review of the paper “Improved Priority Exchange Server”

I have read your scientific paper about the “Improved Priority Exchange Server” and here I will write my review of your paper including the pros and cons.

Pros:

- The paper is clearly arranged and well-structured. You have wisely chosen the related subtopics in order to express the flow of your ideas.
- Your writing is straightforward and brief and almost every time you have tried to follow the standard IEEE style.
- I have checked your references, They are fitting to the references and you have cited them clearly.

Cons:

- I could find some small grammar mistakes and typos. However, you can fix them throughout the revision
- I found some empty spaces in the structure (eg: between abstract and motivation)
In case you not using a latex editor such as Overleaf, I would recommend you to use it.
- The pictures you have uploaded are not quite clear. If it is possible please try to increase the size of the picture and If you upload the picture in ‘.PNG’ format, the quality of the picture won't change when you are resizing it.

In conclusion, I would say I got a brief idea of what “Improved Priority Exchange Server” is. The paper's organization, writing style and scientific approach are great, but there is always room for development. I hope this review will be helpful for your revision purpose.

Thank You.

Yours sincerely,

Lochana Abhayawardana
