The paper consists of an introduction about the constant bandwidth server as a scheduling algorithm while describing the algorithm briefly. The paper also discusses various methods to ensure task execution such as resource reservation and reclamation. I would recommend relating the CBS algorithm with the methods that you have described within your paper, as well as maybe describing the algorithm instead of simply referring to the figure. Keep brackets specifically for citations (rewrite "below in Figure [2] to "Figure 02" within "the CBS algorithm and its implementation" section). Some background information could be added within the abstract, introduction, or in a section of its own to help add context and add clarity to the methods mentioned.

Pros:
- Well-structured form

Cons:
- Only one reference is cited.
- Multiple sections have not been added.
- Unclear definition of DPS server
- Some grammatical errors can be found throughout.
